My SLT web portal UI redesign(existing)

- Redesigned web portal UIs using Figma, creating a cohesive user experience.
- Linked UI elements and incorporated both static and dynamic objects.
- Built interactive prototypes to demonstrate functionality.
- Presented design and prototype to SLT supervisors for feedback and approval.

Server room controller system

- Developed a temperature monitoring system using Wokwi, Firebase, and Android Studio.
- Configured a sensor to track server room temperature, sending data to Firebase real time.
- Automated extra cooling system activation if temperature exceeds threshold, with automatic shutdown when temperature normalizes.
- Enabled manual control of the cooling system via a mobile app connected to Firebase.
